

**FCDMC ALERT SYSTEM  
ANNUAL PRECIPITATION REPORT**

**WATER YEAR 1994**

## **PREFACE**

This publication presents precipitation data collected by the Flood Control District of Maricopa County's automated rain gauge network. This telemetered network is located primarily throughout Maricopa County, Arizona with additional gauges in Yavapai, Pinal, Gila, and La Paz Counties.

The precipitation data contained in this report was collected, compiled, and edited by the Special Projects Branch of the Hydrology Division. Data includes daily, monthly, and annual totals for 164 stations. Information contained herein is as accurate and complete as possible within the limitations of real-time data collection technology currently available. Wherever possible, footnotes have been included to identify questionable, estimated, or missing data. Reliance upon the accuracy, reliability, or authority of this information is solely the responsibility of the user.

Additional copies of this report, a companion volume "Surface Water Report - Water Year 1994", and a Storm Report for the rainfall event of October 6, 1993 may be purchased from:

**Flood Control District of Maricopa County  
2801 W. Durango St.  
Phoenix, AZ 85009

# TABLE OF CONTENTS

Preface.....	i
Contents.....	ii
Introduction .....	iii
Precipitation Gauge Location Map (Figure 1).....	iv
Precipitation Gauge ID Numbers and Descriptors (Table I) .....	v
Precipitation Gauges Installed during Water Year 1993 (Table II) .....	vi
Annual Rainfall Totals Table (Table III) .....	vii
Annual Rainfall Totals Map (Figure 2).....	viii

## **Precipitation Data**

Annual Totals and Statistics for All Stations .....	1-164
---	-------

# INTRODUCTION

The following describes the arrangement, collection, and compilation of precipitation data in this report.

1. Data is tabulated for each precipitation gauge based on the "1994 Water Year" which begins Oct. 1st, 1993 and ends on Sep. 30th, 1994. Each data page represents one gauge, and lists the daily precipitation totals, the monthly totals, the cumulative rainfall by month, the maximum daily value each month, and the number of days with rain. The data pages are arranged in ascending order by sensor ID number.
2. The unit of measurement for daily precipitation totals provided in this report is inches. Annual totals are also provided in millimeters.
3. An index of gauge names, numbers, locations, and other descriptors is included as Table I (page v).
4. All of the data in this report has been reviewed and/or edited in an attempt to provide the most accurate data possible. Where possible, inaccurate data is flagged with a footnote describing the time the gauge was down, the cumulative rainfall count in mm at the beginning and end of the down period, whether or not rain fell during that time, and whether or not monthly and annual totals were affected. For example, a footnote might read " Gauge down from 2/12 03:40 (92) through 2/14 13:30 (94) due to lightning strike; rainfall assigned to 2/13", where the values in parentheses are the beginning and end rainfall counts in mm.
5. Several snow gauges are installed at high-elevation sites during the winter months. The snow gages use a large solar panel/battery to heat a coil on the raingauge funnel whenever the temperature drops below freezing, melting the snow as it hits. These snow gauges are located at Towers Mountain, Crown King, Mt. Union, Mt. Ord, Horsethief Basin, and Signal Peak. In a few instances, the snow equipment failed, and snow melted into the gauges over a period of several days. These instances are footnoted on the data sheets.
6. Table II (Page vi) lists the sensors installed in the FCDMC ALERT System during Water Year 1994 and their installation dates. Table III lists the annual rainfall total for each gauge, sorted by decreasing amount. Table III can also be used as a quick reference to determine which gauges were installed during the Water Year, which had incomplete records, and which had estimated totals. In the case of estimated totals, one or more daily totals were calculated using either the Isohyetal or Thiessen polygon methods applied to nearby stations.
7. Additional or more detailed precipitation data in hard copy or computer disk format is available for the gauges listed in this report. Contact the Flood Control District, Hydrology Division, Special Projects Branch at (602) 506-1501.
8. Note on data compilation: Automatic rain gauges in this network measure rainfall depth in 1mm increments. The base station computer uses the equation  $1\text{mm} = 1/25.4$  or 0.03937 inches to convert millimeters to inches. As a result, daily totals may sum to a slightly different total than the reported monthly total (which is more accurate than the sum of the daily totals) because of rounding errors. In the same way, the annual totals reported in Table III may not match exactly the sum of the monthly totals, but can be considered more accurate.
9. Note on the accuracy of monthly and annual totals: Because automatic ALERT gages are designed for flood warning first and data collection second, there is some inherent error associated with their use. Tipping buckets collect rainfall in 1mm increments before sending a signal and dumping the accumulated rainfall. Because evaporation often dries the bucket between storms, the measurement error probably averages out to be 0.05 mm (0.02 in) times the number of rainfall events during the period of interest (month or year). It is also conceivable that during times of low evaporation and/or short times between storms that the bucket could be partially or nearly full at the start of a rainstorm.

**Notes:**

Annual rainfall in mm: 362

Inaccurate monthly totals in Feb. & March, reason unknown, inaccurate annual total.

Gage down from 7/28 13:46 (291) through 8/02 18:16 (296) due to repeater failure; assigned rainfall to 7/28.

Gage down from 8/14 17:51 (306) thru 8/17 12:07 (306) due to lightning strike. Probable rainfall lost on 8/16.

Gauge down from 9/04 07:44 (361) through 9/07 13:49 (361) due to repeater failure; assume no rain fell.
