

**FCDMC ALERT SYSTEM
ANNUAL PRECIPITATION REPORT**

WATER YEAR 1993

PREFACE

This publication presents precipitation data collected by the Flood Control District of Maricopa County's automated rain gauge network. This telemetered network is located primarily throughout Maricopa County, Arizona with additional gauges in Yavapai, Pinal, Gila, and La Paz Counties.

This precipitation data contained in this report was collected, compiled, and edited by the Special Projects Branch of the Hydrology Division. Data includes daily, monthly, and annual totals for 138 stations. Information contained herein is as accurate and complete as possible within the limitations of real-time data collection technology currently available. Wherever possible, footnotes have been included to identify questionable data. Reliance upon the accuracy, reliability, and authority of this information is solely the responsibility of the user.

Additional copies of this report, and a companion volume "Storm Report - January 1993", may be purchased from:

Group 12: Salt River South [Cave Creek / Salt 1]	70
Group 13: Indian Bend Wash [Cave Creek / Salt 2]	76
Group 14: Phoenix Metro 1 [Cave Creek / Salt 3].....	82
Group 15: Phoenix Metro 2 [Cave Creek / Salt 4]	88
Group 16: Az Canal Diversion Channel [Cave Creek / Salt 5]	94
Group 17: Upper Cave Creek [Cave Creek / Salt 6]	100
Group 18: South Mountain [Gila / Queen Creek 1]	106
Group 19: East Maricopa Floodway [Gila / Queen Creek 2]	112
Group 20: East Valley Structures [Gila / Queen Creek 3]	118
Group 21: Superstition Mountains [Gila / Queen Creek 4].....	124
Group 22: Lower Waterman Wash	130
Group 23: Upper Waterman Wash	136
Group 24: Sauceda Wash	142

INTRODUCTION

The following paragraphs describe the arrangement, collection, and compilation of precipitation data in this report.

1. Precipitation data collected from individual gauging sites is arranged in groups of four to eight, generally within the same watershed or affecting runoff at a particular wash or river. As listed in the Table of Contents, each group has a name, and may be followed by the name of a larger watershed which encompasses several groups. Data is tabulated within these groups by month, based on the "1993 Water Year" which begins Oct. 1st, 1992 and ends on Sep. 30th, 1993.
2. The unit of measurement for daily precipitation totals provided in this report is inches. Monthly and annual totals are provided in inches and millimeters.
3. All of the data in this report has been reviewed and edited in an attempt to provide the most accurate data possible. A blank or blanks within the data set is an indication that data was either lost due to hardware, software, or a radio problem, or that the gauge had not yet been installed. Table II (Page vi) lists the gauges installed during Water Year 1993 and their installation dates. Where possible, inaccurate data is flagged with a footnote describing the time the gauge was down, whether or not rain fell during that time, and whether or not monthly and annual totals were affected.
4. An index of gauge names, numbers, locations, and other descriptors is included as Table I (page v).
5. Additional or more detailed precipitation data in hard copy or computer disk format is available for the gauges listed in this report. Contact the Flood Control District, Hydrology Division, Special Projects Branch at (602) 506-1501.
6. Note on data compilation: Automatic rain gauges in this network measure rainfall depth in 1mm increments. The base station computer uses the equation $1\text{mm} = 1/25.4$ or 0.03937 inches to convert millimeters to inches. As a result, daily totals may sum to a slightly different total than the reported monthly total (which is more accurate than the sum of the daily totals) because of rounding errors. Along the same lines, the annual totals reported in Table III may not match exactly the sum of the monthly totals, but are considered more accurate.
7. Note on the accuracy of monthly and annual totals: Because the automatic gauges were designed for flood warning first and data collection second, there is some inherent error associated with their use. Tipping buckets collect rainfall in 1mm increments before sending a signal and dumping the accumulated rainfall. Because evaporation often dries the bucket between storms, the measurement error probably averages out to be 0.05 mm (≈ 0.02 in) times the number of rainfall events during the period of interest (month or year). It is also conceivable that during times of low evaporation and/or short times between storms that the bucket could be partially or nearly full at the start of a rainstorm.

(1) At this point Mt. Union (5380) developed an antifreeze leak into the tipping bucket. Because a leak is hard to detect and because of snow-covered roads the precipitation record will be corrupt until 5/31/93. However, data from an event-driven test gauge next to 5380 has been substituted into the 5380 record for this period. The daily and monthly totals are assumed to be correct, however, blanks occur in the record rather than zeros because the test gauge sent data only during rainfall events.

(1) No record of gage being down, but lack of data for 8/25 through 8/29 is suspicious given proximity to 5245; suggest that montly and annual totals are inaccurate.

(2) Gage down from 8/29 02:36 (357) through 8/31 11:46 (404) due to bad antenna; assumed all rain fell on 8/29.

(3) Gage down from 8/19 08:48 (336) through 8/24 09:53 (336); no rain fell.
